

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. ## NAMES AND CAUSES OF DEATH.

---

In the construction of the classification here adopted, use has been made of the results and conclusions of a committee of the Royal College of Physicians, of England, (who have been engaged for several years in a revision of the British nomenclature of diseases), as far as such conclusions have been ascertained from brief reports in different medical journals, and from such other sources as were accessible, (the complete report not having yet been issued) and from examination of the classifications in use in different countries in Europe and America.

The statistical nosology consists of two lists of causes of death,

### A TABULAR LIST AND SUPPLEMENTAL LIST.

The tabular list comprises the chief or primary cause of death which is used in Table IV in the preparation of this report, and does, therefore, include all those named in the supplemental list, when the final arrangement is completed.

The supplemental list is subordinate to the tabular list, and contains synonyms, or names of related diseases, which may be actually or are supposed to be, causes of death, and which are in addition to those in the tabular list, and which are often found in physicians' certificates of death. These all have a place, in alphabetical order, in table III, and will be variously grouped under different heads in Table IV, as the figure which precedes each cause in the supplemental list will correspond with the figure of the head in the tabular list under which that cause is placed.

# RESULTS AND OBSERVATIONS. 1893.

## GENERAL SUMMARY.

During the year ending December 31, 1893, the whole number of living births recorded in the State was 6,816, of which 3,513 were males, 3,300 females, and 3 unknown. Compared with 1892. the number of births was 258 more, and with 1891 it was 82 more.

During the same period the number of couples married was 2,941, 36 couples more than in 1892.

The number of decedants for the same period was 5,569, of which 2,870 were males, and 2,688 were females. Of 11 the sex is not stated.

Compared with 1892, the number of decedants was 628 less, and with 1891 it was 47 less.

The population of the State by the census of 1890 was 332,343. There was, therefore, during the year, one-birth to every 48.75 of the population, against one in every 50.67 in 1892, and one to every 50 in 1891. One person in every 56.42 was married during the year, against one in every 57.20 in 1892.

There was one decedent to every 59.67 of the population against one to every 53.62 in 1892.

The following table groups together the main facts in the registration of births, marriages and deaths during the thirty-seven years covered by these reports.

## NAMES AND CAUSES OF DEATH.

---

In the construction of the classification here adopted, use has been made of the results and conclusions of a committee of the Royal College of Physicians, of England, (who have been engaged for several years in the revision of the British nomenclature of diseases), as far as such conclusions have been ascertained from brief reports in different medical journals, and from such other sources as were accessible, (the complete report not having yet been issued) and from examination of the classifications in use in different countries in Europe and America.

The statistical nosology consists of two lists of causes of death,

### A TABULAR LIST AND SUPPLEMENTAL LIST.

The tabular list comprises the chief or primary cause of death which is used in Table IV in the preparation of this report, and does, therefore, include all those named in the supplemental list, when the final arrangement is completed.

The supplemental list is subordinate to the tabular list, and contains synonyms, or names of related diseases, which may be actually or are supposed to be, causes of death, and which are in addition to those in the tabular list, and which are often found in physicians' certificates of death. These all have a place, in alphabetical order, in Table III, and will be variously grouped under different heads in Table IV, as the figure which precedes each cause in the supplemental list will correspond with the figure of the head in the tabular list under which that cause is placed.

## NOMENCLATURE OF CAUSES OF DEATH.

## CLASSES.

- I. GENERAL DISEASES....A. Specific and febrile. (*Zymotic*).
- II. GENERAL DISEASES....B. Cachetic. (*Constitutional*.)
- III. SPECIAL DISEASES....A. Functional or organic. (*Local*.)
- IV. SPECIAL DISEASES....B. Developmental. (*Developmental*.)
- V. VIOLENT DEATHS.....From Injuries. (*Violence*.)

## SUB-GROUPS OR ORDERS.

## CLASS I.—ZYMOTIC DISEASES.

Order one, Miasmatic. Order two, Enthetic. Order three, Dietic.  
Order four, Parasitic.

## CLASS II.—CONSTITUTIONAL DISEASES.

Order one, Diathetic. Order two, Tubercular.

## CLASS III.—LOCAL DISEASES.

Order one, Diseases of the Nervous system. Order two, Organs of Circulation. Order three, Organs of Respiration. Order four, Organs of Digestion. Order five, Urinary Organs. Order six, Reproductive organs. Order seven, Osseous and Locomotary Organs. Order eight, Integumentary system.

## CLASS IV.—DEVELOPMENTAL DISEASES.

Order one, Of Children. Order two, Of Women. Order three, Of Old Age. Order four, Of Nutrition.

## CLASS V.—VIOLENT DEATHS.

Order one, Accidents and Negligence. Order two, Homicide.  
Order three, Suicide.

# RESULTS AND OBSERVATIONS.

## 1894.

### GENERAL SUMMARY.

During the year ending December 31, 1894, the whole number of living births recorded in the State was 6,828, of which 3,521 were males, 3,296 females, and 11 unknown. Compared with 1893 the number of births was 12 more, and with 1892 it was 270 more.

During the same period the number of couples married was 2,828, 113 couples less than in 1893.

The number of decedents for the same period was 5,410, of which 2,692 were males and 2,680 were females. Of 38 the sex is not stated.

Compared with 1893, the number of decedents was 159 less, and with 1892 it was 787 less.

The population of the State by the census of 1890 was 332,343. There was therefore, during the year, one birth to every 48.67 of the population, against one in every 48.75 in 1893, and one to every 50.6 in 1892. One person in every 58.75 was married during the year, against one in every 56.42 in 1893.

There was one decedent to every 61.43 of the population, against one to every 59.67 in 1893.

The following table groups together the main facts in the registration of births, marriages and deaths during the thirty-eight years covered by these reports:

## NAMES AND CAUSES OF DEATH.

---

In the construction of the classification here adopted, use has been made of the results and conclusions of a committee of the Royal College of Physicians, of England, (who have been engaged for several years in a revision of the British nomenclature of diseases), as far as such conclusions have been ascertained from brief reports in different medical journals, and from such other sources as were accessible, (the complete report not having yet been issued) and from examination of the classifications in use in different countries in Europe and America.

The statistical nosology consists of two lists of causes of death,

### A TABULAR LIST AND SUPPLEMENTAL LIST.

The tabular list comprises the chief or primary cause of death which is used in Table IV in the preparation of this report, and does, therefore, include all those named in the supplemental list, when the final arrangement is completed.

The supplemental list is subordinate to the tabular list, and contains synonyms, or names of related diseases, which may be actually or are supposed to be, causes of death, and which are in addition to those in the tabular list, and which are often found in physicians' certificates of death. These all have a place, in alphabetical order, in Table III, and will be variously grouped under different heads in Table IV, as the figure which precedes each cause in the supplemental list will correspond with the figure of the head in the tabular list under which that cause is placed.

# RESULTS AND OBSERVATIONS.

## 1895.

### GENERAL SUMMARY.

During the year ending December 31, 1895, the whole number of living births recorded in the State was 7,040, of which 3,612 were males, 3,425 females, and 3 unknown. Compared with 1894 the number of births was 212 more, and with 1893 it was 224 more.

During the same period the number of couples married was 2,955, 127 couples more than in 1894.

The number of decedents for the same period was 5,488, of which 2,852 were males and 2,632 were females. Of 4 the sex is not stated.

Compared with 1894, the number of decedents was 127 more, and with 1893 it was 81 less.

The population of the State by the census of 1890 was 332,343. There was therefore, during the year, one birth to every 47.20 of the population, against one in every 48.67 in 1894, and one to every 48.75 in 1893. One person in every 56.23 was married during the year, against one in every 58.75 in 1894.

There was one decedent to every 60.55 of the population, against one to every 61.43 in 1894.

The following table groups together the main facts in the registration of births, marriages and deaths during the thirty-nine years covered by these reports:

## NAMES AND CAUSES OF DEATH.

---

In the construction of the classification here adopted, use has been made of the results and conclusions of a committee of the Royal College of Physicians, of England, (who have been engaged for several years in a revision of the British nomenclature of diseases), as far as such conclusions have been ascertained from brief reports in different medical journals, and from such other sources as were accessible, (the complete report not having yet been issued) and from examination of the classifications in use in different countries in Europe and America.

The statistical nosology consists of two lists of causes of death.

### A TABULAR LIST AND SUPPLEMENTAL LIST.

The tabular list comprises the chief or primary cause of death which is used in Table IV in the preparation of this report, and does, therefore, include all those named in the supplemental list, when the final arrangement is completed.

The supplemental list is subordinate to the tabular list, and contains synonyms, or names of related diseases, which may be actually or are supposed to be, causes of death, and which are in addition to those in the tabular list, and which are often found in physicians' certificates of death. These all have a place, in alphabetical order, in Table III, and will be variously grouped under different heads in Table IV, as the figure which precedes each cause in the supplemental list will correspond with the figure of the head in the tabular list under which that cause is placed.

## NOMENCLATURE OF CAUSES OF DEATH.

### CLASSES.

- I. GENERAL DISEASES...A. Specific and febrile. (*Zymotic.*)
- II. GENERAL DISEASES...B. Cachetic. (*Constitutional.*)
- III. SPECIAL DISEASES...A. Functional or organic. (*Local.*)
- IV. SPECIAL DISEASES...B. Developmental. (*Developmental.*)
- V. VIOLENT DEATHS....From Injuries. (*Violence.*)

## RESULTS AND OBSERVATIONS—1896.

### GENERAL SUMMARY.

During the year ending December 31, 1896, the whole number of living births recorded in this State was 7,041, of which 3,621 were males, 3,419 females, and 1 unknown. Compared with 1895 the number of births was 1 more, and with 1894 it was 213 more.

During the same period the number of couples married was 3,041, 86 couples more than in 1895.

The number of decedents for the same period was 5,543, of which 2,867 were males, and 2,671 were females. Of 5 the sex is not stated.

Compared with 1895 the number of decedents was 55 more, and with 1894 it was 133 more.

The population of the State by the census of 1890 was 332,343. There was therefore, during the year, one birth to every 47.20 of the population, against one in every 47.20 in 1895, and one in every 48.67 in 1894. One person in every 54.64 was married during the year, against one in every 56.23 in 1895.

The following table groups together the main facts in the registration of births, marriages and deaths during the forty years covered by these reports:
